Abstracts

Dental charting software is a specialized category of clinical management tools designed to digitize the process of documenting a patient's oral health status, replacing traditional paper-based charts. It enables dental professionals to create, update, and store detailed graphical and textual records of teeth, gums, oral pathologies, treatment plans, and clinical notes in a standardized electronic format. These systems typically integrate features such as tooth numbering systems (e.g., ISO, Universal, Palmer), periodontal charting, graphical representation of restorations and conditions, imaging integration (e.g., X-rays, intraoral scans), and often interface with broader practice management software for scheduling, billing, and patient communication. By enhancing accuracy, efficiency, and accessibility of patient data, dental charting software supports clinical decision-making, improves regulatory compliance, and facilitates communication among dental care providers.

The global Dental Charting Software market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
