Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dental Cold Pack competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of dental cold packs reached 120 million units, with an average selling price of US\$3.80. Dental cold packs are medical aids used in post-operative settings, tooth extractions, and orthodontics, alleviating swelling, alleviating pain, and accelerating recovery. Their upstream raw materials primarily include medical-grade non-woven fabrics, PVC film, gel fillers (such as polymer hydrogels and carboxymethyl cellulose), and packaging materials. Major suppliers include DuPont, Covestro, and Sumitomo Chemical. Annual production capacity per production line is approximately 5 to 8 million units, with a total capacity exceeding 300 million units. The industry's average gross profit margin is approximately 30%-35%. In terms of downstream consumption, dental clinics and general hospital dentistry departments account for approximately 60%, pharmacies and online retail channels account for approximately 30%, and home post-operative rehabilitation and emergency care account for approximately 10%. With the global increase in oral disease treatments, the promotion of minimally invasive surgery, and the growing demand for home self-care, the dental cold pack market is expected to continue to grow, with a trend toward biodegradable and environmentally friendly materials and long-lasting temperature-controlled products.

The global Dental Cold Pack market size was estimated at USD 456.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
