## Abstracts

Dental ERP Software is an integrated information management platform specifically designed for dental healthcare institutions. By integrating three core modules—clinical, operational, and supply chain—it enables digital, end-to-end management of dental clinics. Centered on electronic medical records, the system seamlessly connects patient appointments, clinical treatment, material consumption tracking, and financial billing, while also covering supply chain management such as consumable procurement, instrument sterilization traceability, and inventory alerts. Its core value lies in breaking down the barriers between medical and operational data. Through visualized reports analyzing clinic efficiency, disease-specific profits, and consumable costs, it helps managers optimize the allocation of medical resources, achieving refined operations while ensuring medical quality. It has become a core management tool for modern dental institutions to improve service efficiency and reduce operating costs. The global dental ERP software market exhibits a significant regional differentiation. North America and Europe, as the dominant markets, are driven by mature dental management software ecosystems, focusing on data compliance, cross-clinic collaboration, and advanced clinical function integration. The Asia-Pacific region is the fastest-growing market, particularly China and India, where local vendors such as Dental Manager are rapidly expanding due to cost advantages and deep localization services, primarily meeting the urgent needs of small and medium-sized clinics transitioning from manual management to digitalization. The Latin American and Middle Eastern/African markets are in their early stages of development, with demand concentrated on basic clinic management functions; growth is significantly influenced by local healthcare digitization levels and economic fluctuations. A common global trend is the accelerated replacement of traditional standalone software by cloud-based SaaS solutions, and the initial application of artificial intelligence in clinical diagnostic assistance and operational optimization.

The global Dental ERP Software market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
