## Abstracts

Dental face scanners are digital devices designed to capture three-dimensional images of a patient's face, widely used in orthodontics, implantology, and maxillofacial surgery. Compared to traditional 2D photography, they provide more precise and detailed facial data, allowing clinicians to make more accurate diagnoses and treatment plans. These scanners typically utilize structured light, laser, or photogrammetry technology and can be integrated with intraoral scanners and CBCT systems to enhance digital dental workflows. By improving diagnostic accuracy, enhancing patient communication, and optimizing treatment planning, dental face scanners are becoming an essential tool in modern dental practice.
