Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dental Phosphor Plate System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Dental Phosphor Plate System is a specialized system for dental image acquisition and processing based on the storage and reading of fluorescent substances, mainly phosphorus particles. The Dental Phosphor Plate System utilizes a Storage Phosphor Plate (SPP or IP plate) as an image receiver. The Dental Phosphor Plate System utilizes the Storage Phosphor Plate (SPP or IP Plate) as an image receiver by receiving X-ray radiation and storing latent images in the phosphor substance, which are subsequently read using laser scanning technology and converted into digital images for subsequent diagnosis and analysis. The system combines digital imaging technology with the needs of dental medicine to provide dentists with an efficient, low-radiation, high-quality imaging solution.

- 1. Cost-Effective Digital Imaging**Dental phosphor plate systems offer a lower-cost entry point into digital imaging compared to CMOS or CCD sensors. Plates are reusable and cheaper to replace than digital sensors. Ideal for small-to-mid-sized practices in emerging markets or cost-sensitive regions.
- 2. Wider Imaging Area & Flexibility**PSP plates are thin and flexible, making them easier to position in difficult or small mouths. Available in multiple sizes (0 to 4), offering versatility in pediatric, general, and specialty dentistry. Better tolerated by patients with a strong gag reflex or anatomical limitations.
- 3. Radiation Dose Efficiency**Dental phosphor plate systems require lower radiation doses compared to some sensor-based systems. This is increasingly important under growing regulatory pressure to reduce patient exposure (e.g., ALARA principle).
- 4. Infrastructure Compatibility**Dental phosphor plate systems often integrate easily with existing X-ray units. Digital transition doesn't require full infrastructure replacement—ideal for clinics

upgrading from film.5. Continued Use in Veterinary and Niche Medical FieldsDental phosphor plate systems are commonly used in veterinary radiology, mobile clinics, and forensic odontology due to their portability and robust imaging capabilities.6. Emerging EconomiesAsia-Pacific, Latin America, and parts of Africa are adopting dental phosphor plate systems as a stepping stone toward full digital radiography. These regions demand affordable, low-maintenance, and high-durability imaging solutions.

The global Dental Phosphor Plate System market size was estimated at USD 146.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
