## Abstracts

Dental prosthetic materials comprise a diverse range of biomaterials?including ceramics, metals, polymers, and composites?engineered for the fabrication of dental restorations such as crowns, bridges, dentures, implants, and veneers, with properties tailored to replicate the function, durability, and aesthetics of natural teeth while ensuring biocompatibility, mechanical strength, and resistance to oral environmental factors. The global market is driven by rising geriatric populations, increasing dental disorders, growing aesthetic consciousness, and technological advancements in digital dentistry and CAD/CAM systems, with ceramics?particularly zirconia?gaining prominence for their superior aesthetics and strength, though cost constraints and the need for specialized training present challenges; key regional markets include North America and Europe due to high healthcare expenditure and adoption of advanced dental solutions, while Asia-Pacific shows rapid growth fueled by expanding medical infrastructure and rising disposable incomes. Competition is intense among established players and emerging manufacturers, with innovation focusing on improving material properties, reducing production times, and enhancing patient-specific customization through digital workflows.

The global Dental Prosthetic Material market size was estimated at USD 1725.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
