Report Overview:

Increasing applications of dental implants in various therapeutic areas along with increasing demand for prosthetics are some of the key factors expected to boost the market growth. Prosthetics play a major role in propelling the demand for these implants through oral rehabilitation, which helps in restoring oral function and facial form of a patient. Acceptance level for dental implants is increasing among patients and dental surgeons due to limitations of removable prosthetics, such as discomfort, lack of natural appearance, and need for maintenance. Prosthetics mounted on dental implants do not encroach soft tissues and enhance aesthetics, which is further expected to drive the market.

The Global Dental Restorative Implant Market Size was estimated at USD 4682.82 million in 2023 and is projected to reach USD 7267.43 million by 2029, exhibiting a CAGR of 7.60% during the forecast period.
