Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dental Simulation Units competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dental Simulation Units are mainly used for simulating oral implant surgery. They have unique technical advantages in realistic rendering of 3D surgical scenes and real-time (1000HZ)/fine (accurately distinguishing skin, bones, and teeth) force feedback. They have multidisciplinary oral operation simulation functions and precise spatial registration, which makes the virtual tools seen by users and the tools held by users overlap approximately, improving the sense of immersion. The personalized operation settings and neutral sitting posture of the operator, as well as the perfect assessment and scoring rules, enable students to not only receive complete operation process training, but also video playback of the operation and standard systematic evaluation to make teaching more targeted. Dental Simulation Units are used to practice dental surgery on virtual patients/model heads. The case range covers manipulation techniques, dental surgery, prosthodontics, endodontics, periodontology, anesthesiology, implantology, and pediatric dentistry.

The global Dental Simulation Units market size was estimated at USD 402.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
