## Abstracts

A dental tissue ablation laser is a cutting-edge instrument used in dental procedures to remove or reshape soft and hard tissues with high precision and minimal discomfort. By emitting concentrated light energy, these lasers effectively target and vaporize diseased or damaged tissue, making them ideal for procedures such as gum reshaping, cavity removal, and treating periodontal disease. The laser's accuracy allows for less invasive treatments compared to traditional methods, reducing pain, bleeding, and recovery time. Furthermore, the sterilizing effect of the laser minimizes the risk of infection, enhancing patient outcomes and overall dental care quality.

The global Dental Tissue Ablation Laser market size was estimated at USD 211.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
