Report Overview

Dental Unit Waterlines (DUWL) are small-bore tubes that deliver water to dental handpieces, air/water syringes, and ultrasonic scalers in dental units. These waterlines are essential components of dental equipment, providing a water source for various dental procedures. The quality of water in DUWL is crucial as it directly impacts patient safety by preventing the spread of harmful bacteria and biofilm formation. Regular maintenance and monitoring of DUWL are necessary to ensure water quality standards are met, in accordance with guidelines set by regulatory bodies such as the CDC and ADA.
