Abstracts

Dental whitening lamps are professional-grade or consumer-oriented devices that accelerate tooth-bleaching procedures by emitting specific wavelengths of light (typically blue or ultraviolet) to activate peroxide-based whitening gels. These lamps are primarily used in dental clinics under professional supervision but are increasingly available for at-home use through over-the-counter kits, with models ranging from high-intensity, chairside units to low-energy, LED-based portable devices. The technology aims to enhance the oxidation process of whitening agents, reducing treatment time and improving efficacy, though its necessity and performance compared to gel-only applications remain topics of ongoing clinical discussion and consumer preference.
