Report Overview

Desktop Active Vibration Isolation Tables are specialized platforms designed to reduce or eliminate vibrations that could interfere with sensitive equipment or experiments, such as microscopes, lasers, or precision measurement devices. Unlike passive systems, which rely on materials like rubber or springs to dampen vibrations, active isolation tables use sensors, actuators, and control systems to detect and counteract vibrations in real-time. These tables are typically compact, making them suitable for use on desktops or benchtops in laboratories, research facilities, or industrial settings where precision is critical.
