Report Overview

Desktop power adapter is a power supply conversion device for small portable electronic equipment and electronic appliances. Its function is to convert AC power to DC power, or to convert one DC voltage to another DC voltage. The characteristic of the desktop power adapter is that its body needs to be placed on the desktop instead of directly plugged into the socket. It requires an AC line to connect to the mains power, and then a DC line to connect to the device that needs power. The advantage of the desktop power adapter is that it can withstand greater power and has better heat dissipation performance. It is suitable for notebooks, monitors, printers and other equipment. The disadvantage of the desktop power adapter is that it takes up a lot of space, is inconvenient to carry, and can easily cause cable clutter.

The global Desktop Power Adapter market size was estimated at USD 1501.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Desktop Power Adapter market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
