Abstracts

The video booth market has great market potential, thanks to its excellent product performance. Because it can replace traditional projectors, slide projectors and other equipment to achieve multiple uses in one machine, it plays a very important role under the trend of the country encouraging intelligent education and low-carbon office work in enterprises. There is also a high-definition camera product on the market, which has a similar function to the video booth. However, the high-definition camera is mainly connected to the computer through a USB interface, while the video booth can not only use a USB interface, but also has HIMI and other interfaces. It can be directly connected to display devices such as TVs and projectors for richer functions. There are also desktop, wall-mounted and portable types to choose from, so the market size has continued to grow steadily. The outbreak of the COVID-19 epidemic in 2020 also had a certain impact on the market. Because the downstream industries of this market are mainly concentrated in education, teaching and training, corporate meetings, and the public security and judicial system. In order to curb the spread of the new coronavirus, many countries around the world have adopted isolation measures to varying degrees. Schools have suspended classes or switched to online education. Enterprises and government departments have also adopted shutdown or home office models, resulting in a huge demand for video booths. decreased
