Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Desktop X-ray Absorption Fine Structure Spectrometer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The desktop XAFS is a compact laboratory device that can perform XAFS analysis in a local laboratory. It uses X-rays to irradiate samples and detects subtle structural changes in and around the X-ray energy absorption edge to obtain local environmental information of specific elements in the material, such as coordination number, bond length, and oxidation state. Compared with traditional XAFS technology that relies on large synchrotron radiation sources, desktop XAFS instruments are more convenient and cost-effective to use, and can provide key chemical state and structural information in a shorter time. It is suitable for research in many fields such as materials science, chemistry, environmental science, and life science. The development trend of desktop X-ray absorption fine structure spectrometer (XAFS) is mainly reflected in the continuous advancement of technology and the expansion of application fields. With the development of technology, this type of equipment is moving towards higher resolution, faster data acquisition speed and smaller footprint, while maintaining or reducing equipment costs, so that more laboratories can afford this high-end analytical tool. In addition, through improved user interfaces and automated software, operation has become easier and the requirements for operator professional skills have been reduced. In the future, with the increase in demand in new materials research, energy science, environmental science and other fields, desktop XAFS spectrometers are expected to play a more important role in scientific research and industrial testing, promoting innovation and development in many aspects from basic research to product quality control.

The global Desktop X-ray Absorption Fine Structure Spectrometer market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
