Abstracts

Desmear and PTH (Plating Through Hole) equipment are critical components in the printed circuit board (PCB) manufacturing process, specifically designed to prepare and metallize the walls of drilled holes in multilayer boards to establish electrical connectivity between layers. Desmear equipment removes epoxy smear left by the drilling process and conditions the hole walls through chemical or plasma treatment, while PTH equipment applies a thin conductive layer—typically using electroless copper deposition—to ensure reliable plating in subsequent electroplating stages. These systems are integral to producing high-density interconnect (HDI) PCBs, as they guarantee the structural integrity and electrical performance of plated through-holes, microvias, and blind vias.

The global Desmear And Pth Equipment market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
