## Abstracts

The desulfurization and denitrification system is an environmentally friendly treatment device used to remove sulfur dioxide and nitrogen oxides from industrial waste gas, aiming to reduce the emission of atmospheric pollutants and meet the requirements of environmental regulations. The system usually includes desulfurization technologies such as wet, dry, and semi-dry methods, as well as denitrification technologies such as selective catalytic reduction and selective non-catalytic reduction. Through chemical reactions or physical adsorption, pollutants are converted into harmless or easy-to-treat substances, and are widely used in thermal power plants, steel smelting, cement production, waste incineration and other industries.

The global Desulfurization and Denitrification System market size was estimated at USD 890.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
