Report Overview

Industrial compressed air and gas systems can suffer damage from water contamination directly or through the water subsequently freezing and expanding. Having water vapour in the air or gas can also affect process or product quality. With the dew point measuring instrument it is possible to determine the humidity, ambient, wet bulb and dew point temperature. Measurements up to 60 °C are possible with the dewpoint meter. The dewpoint meter can therefore be used universally because of its various measuring functions to determine the ambient conditions.
