Abstracts

Dihydroxyacetone (DHA) based sunless tanning refers to products that utilize DHA, a colorless sugar derived primarily from sugar beets or sugarcane, as the active ingredient to temporarily darken the skin?s appearance without exposure to ultraviolet radiation; when applied topically, DHA interacts with amino acids in the dead cells of the stratum corneum to produce a browning effect known as the Maillard reaction, resulting in a tan that typically lasts 5?7 days as the skin naturally exfoliates. This category includes a wide range of formulations such as lotions, mousses, sprays, wipes, and gradual tanning moisturizers, designed for both professional application in salons and at-home use, offering consumers a safer alternative to traditional sunbathing or tanning beds by mitigating the risks associated with UV-induced skin damage and premature aging.
