Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DHT Carrier Supported Foil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. DHT Carrier Supported Foil is a thin, continuous metal foil typically used as a conductive layer on the substrate of a circuit board to create circuit patterns for electronic components. It has excellent conductivity and can accept a printed protective layer, which forms a circuit pattern after etching. DHT Carrier Supported Foil's core technology is widely used in AI server data centers, 5G base stations, and mobile terminals. In 2024, global DHT Carrier Supported Foil production reached approximately 57.47 million Sqm, with an average global market price of around US\$12.3 per Sqm. From a competitive perspective, the global DHT carrier supported foil market is currently dominated by Japan's Mitsui Kinzoku, with an annual production capacity of approximately 50 million square meters, followed by Circuit Foil Luxembourg S.a.r.l., with an annual capacity of approximately 10 million square meters. On July 29, 2025, Defu Technology signed an agreement with Volta Energy Solutions S.r.l. to acquire 100% of Luxembourg Copper Foil for approximately \$174 million. Volta is a subsidiary of Solus. Gross profit margins are extremely high in the industry, exceeding 60%, with even higher margins for ultra-thin products (1.5-3µm). DHT carrier supported foil typically has a much higher gross profit margin than conventional PCB copper foil due to its more complex production process, higher added value, and wider application in high-end electronic products. In the cost structure of DHT carrier supported foil, raw materials account for the largest proportion, approximately 40-50%, followed by processing costs, approximately 30-40%. From the perspective of the industrial chain, the upstream of DHT Carrier Supported Foil is electrolytic copper, resin substrates, chemicals, etc.; the downstream is manufacturers of IC packaging substrates, flexible

circuit boards, HDI substrates, etc., and representative manufacturers include Avary Holding, Shennan Circuits, AKM Meadville, Samsung Electro-Mechanics, etc.

The global DHT Carrier Supported Foil market size was estimated at USD 707.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.80% during the forecast period.
