Abstracts

The market for diabetic therapeutic drugs encompasses a wide range of pharmaceutical products designed to manage and treat diabetes mellitus, a chronic metabolic disorder characterized by hyperglycemia resulting from defects in insulin secretion, insulin action, or both. These drugs are categorized primarily into medications for type 1 diabetes, which include various forms of insulin (such as rapid-acting, long-acting, and premixed analogs) administered via injection or inhalation to compensate for the body's inability to produce insulin, and medications for type 2 diabetes, which comprise a diverse array of oral and injectable agents like metformin, sulfonylureas, DPP-4 inhibitors, GLP-1 receptor agonists, SGLT2 inhibitors, and thiazolidinediones that work through mechanisms such as improving insulin sensitivity, stimulating insulin secretion, reducing hepatic glucose production, or promoting urinary glucose excretion. The market also includes newer drug classes and combination therapies aimed at enhancing efficacy, safety, and patient adherence, as well as drugs targeting diabetes-related complications. This sector is driven by factors such as the rising global prevalence of diabetes, growing awareness and diagnosis rates, advancements in drug delivery technologies, and increasing research into personalized medicine approaches, while also facing challenges related to pricing pressures, regulatory hurdles, patent expirations, and the emergence of biosimilars.

The global Diabetic Therapeutic Drugs market size was estimated at USD 54200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
