Report Overview

The diamond air flow crusher generates a high-speed rotating or jetting airflow to suck the diamond material into the crushing chamber. In the crushing chamber, the material is impacted, collided and rubbed by the high-speed airflow, so as to achieve the purpose of crushing the coarse and uneven materials into powder. Finally, the crushed material is collected and discharged through a specific discharge system (such as an exhaust port or a dust collector). Diamond air flow crusher is widely used in occasions that require high-precision and high-efficiency crushing, such as the processing of superhard materials such as diamond. In addition, it is also widely used in chemical, pharmaceutical, food and other industries.
