Report Overview

A diamond circular saw is a cutting tool that uses diamond single crystals as abrasive materials. It grinds and cuts the object to be cut through a high-speed rotating diamond saw blade to complete the cutting work. A diamond circular saw is mainly composed of a diamond circular saw blade, a drive device (such as a hydraulic motor or an electric motor), and a possible cooling and debris removal system. When working, the diamond saw blade rotates at high speed driven by the drive device, and cuts the object to be cut (such as stone, reinforced concrete and other hard materials) through the grinding effect of diamond particles. Diamond circular saws are widely used in stone processing, construction, transportation, geological exploration and other fields. In stone processing, it is used to cut stone rough materials into plates of a certain thickness; in the construction field, it is used to cut structural materials such as reinforced concrete; in geological exploration, it can be used for operations such as rock sampling.

The global Diamond Circular Saw market size was estimated at USD 750 million in 2023 and is projected to reach USD 1022.17 million by 2032, exhibiting a CAGR of 3.50% during the forecast period.
