Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Diamond Dicing Knife competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the production of diamond dicing knives reached 85.4635 million units, with an average selling price of \$10.68 per unit. A diamond dicing knife is a cutting tool used for preparing extremely thin sample slices. Its blade is made of synthetic or natural diamond. Due to diamond's extremely high hardness, toughness, and wear resistance, diamond dicing knives can cut extremely thin, intact slices on high-hardness materials (such as glass, quartz, metals, ceramics, semiconductors, and various solid materials). These knives are widely used in fields such as materials science, semiconductors, geology, mineralogy, and life sciences (such as histopathology and tissue sectioning).

The global Diamond Dicing Knife market size was estimated at USD 913.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
