## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Wire Profiling Machines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of single-wire profiling machines will reach approximately 4,200 units, with an average price of approximately US\$28,000 per machine and an industry average gross profit margin of between 28% and 32%. Single-wire profiling machines are specialized stone processing equipment that utilize a single diamond wire for cutting and contouring. They are capable of high-precision linear cutting and shaping of slabs such as marble, granite, and artificial stone. Due to their high efficiency, narrow kerf, and low material loss, they are widely used in architectural decoration, stone crafts, and tombstone manufacturing. The upstream market primarily relies on the supply of key components such as diamond wire, wear-resistant guide wheels, motors, and CNC systems; the downstream market serves stone mines, stone processing plants, and decorative engineering companies. For example, the renowned European manufacturer THIBAUT has an annual production capacity of approximately 500-600 single-wire profiling machines, primarily serving the high-end stone processing market.

**Product Overview** Single-wire profiling machines enable high-precision, high-efficiency, and low-loss cutting processes in architectural decoration, large sculptures, tombstones, and handicrafts. Typical applications include large mines and integrated stone processing plants, which may utilize more than ten machines.

**Supply Upstream** raw materials primarily include diamond wire, wear-resistant alloy guide wheels, high-strength steel frames, servo motors, and CNC systems. Typical suppliers include Element Six, Sandvik, Siemens, SKF, and Schneider Electric.

**Manufacturer Features** Breton has an annual production capacity of approximately 650 units and maintains a leading position in the European high-end stone processing equipment

market; Edab Automation has an annual production capacity of approximately 280 units, widely used in the Italian and Middle Eastern stone processing industries; THIBAUT has an annual production capacity of approximately 500-600 units and specializes in high-end decorative stone processing. Applications Architectural decoration and curtain wall processing: Customers include China State Construction and Bouygues. Crafts and Sculpture Processing: Clients include Artigiani Pietra and Quyang Stone. Large Stone Mines and Raw Material Plants: Clients include Levantina and Cosentino. Comprehensive Stone Processing Plants and Exporters: Clients include Antolini and Xishi Stone. Technological Trends Single-wire profiling machines are developing towards higher efficiency, intelligence, and environmental friendliness. The new generation of equipment utilizes ultra-fine diamond wire (kerf  $\approx$  7mm) to further reduce stone loss. Servo control and automatic tension adjustment systems improve cutting accuracy and tool life. Some manufacturers have integrated 3D CAD/CAM modeling and intelligent profiling algorithms into their equipment, enabling automatic tool path generation and reducing manual programming. Regarding energy conservation and environmental protection, water-circulating cooling and low-energy motors are becoming standard features to meet regulatory requirements for environmental protection and energy efficiency in European and Middle Eastern markets. In the future, AI-based stone defect recognition and automatic cutting path optimization will become industry breakthroughs. Market Influencing Factors The continued development of the global construction industry and urbanization are driving steady growth in demand for high-end stone materials. The tombstone, sculpture, and handicraft markets are experiencing robust demand, providing fundamental support for the industry. However, there are also constraints to the industry's development. Fluctuating prices for key raw materials and equipment, such as upstream diamond wire and servo systems, are putting pressure on cost-sensitive companies. Furthermore, the rapid penetration of stone substitutes, such as artificial stone and ceramic slabs, in certain applications is having a significant impact on the natural stone market. A clear stratification in competition is evident: international manufacturers, leveraging their technological expertise and brand advantages, dominate the high-end market, while Chinese companies, leveraging scaled production and cost advantages, are continuously expanding their market share in the mid- and low-end markets, creating a differentiated competitive landscape.

The global Single Wire Profiling Machines market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
