Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Diamond Slurries competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The conventional definition of slurry is a mixture of water and small particles of a solid. The particles are not normally suspended in the liquid and are maintained in suspension by agitation during the use of the slurry. Diamond Slurry is that the particles are micron sized diamond particles and the liquid (carrier vehicle) can be oil or water based. Diamond Slurries are used for polishing materials that require a mirror finish. They are often used in metallurgical specimens, carbide dies, carbide seals, spectacle glass industry, semiconductor industry and for polishing diamonds, etc. The diamond slurries market is developing rapidly due to various factors. The processes of wafer, chip, packaging, etc. have extremely high requirements for surface roughness. Diamond polishing fluid is suitable for ultra-precision polishing of materials such as Si, SiC, GaN, etc. The rise of technologies such as 5G, AI, and autonomous driving promotes more advanced semiconductor manufacturing, and the demand for high-quality polishing fluid increases. The precision optics and medical device industries use diamond slurries with nano-scale particle size and strong controllability. The demand for high-efficiency and low-damage polishing fluids is growing, which promotes environmentally friendly, water-based diamond polishing fluids to replace traditional oil-based products. Companies in Europe, the United States, South Korea, and Japan, such as Engis Corporation, Saint-Gobain, Lapmaster, Kemet International, Ijlin Diamond, Fujimi Corporation, Pureon, Asahi Diamond, etc., occupy the high-end market. In terms of output value, the top five global manufacturers (Engis Corporation, Saint-Gobain, Lapmaster, Kemet International, Ijlin Diamond) will account for 58.89% of the market in 2024.

The global Diamond Slurries market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
