## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Diamond Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The diamond wire diameter for cutting semiconductor materials is usually 65 $\mu$ m-120 $\mu$ m. Diamond wire can be divided into resin diamond wire and electroplated diamond wire according to the process. Among them, electroplated diamond wire has become the mainstream type of diamond wire due to its excellent economy and diamond fastness. Its production principle is to make diamond micro-powder particles with a certain distribution density uniformly consolidated on the high-strength busbar matrix. Diamond wire through the diamond wire cutting machine, high-speed grinding movement between the body, so as to achieve the cutting of the object. In the diamond wire industry, both global production and consumption are currently concentrated in the Chinese market, accounting for more than 95% of the total. In the coming years, tungsten-core diamond wire is expected to capture a larger market share. Regarding diamond wire substrates, the market is currently dominated by Chinese enterprises, with an estimated share of over 90%. Specifically, tungsten-core substrates are primarily led by Xiamen Tungsten, which holds more than 90% of the market. Over the next few years, more companies are expected to enter this niche segment. At present, photovoltaics represent the largest application field for diamond wire, accounting for more than 98% of demand. Over the next six years, photovoltaics are still expected to maintain a share above 95%. In 2023, the overall semiconductor wafer market reached approximately RMB 110 billion, which is considerable in size. However, the penetration of diamond wire cutting in semiconductor wafer applications remains negligible at this stage. Looking ahead, the market potential is significant, and semiconductors are considered a promising next application field for diamond wire, albeit with considerable uncertainty in its future.
