Abstracts

A diaphragm pressure switch is a device used to monitor and control pressure levels in a system. It works on the basis of an elastic diaphragm that responds to pressure changes in the system. When the pressure in the system reaches a preset value, the diaphragm will displace and trigger the switching element through mechanical connection, thus realizing the opening and closing of the circuit. This type of switch is widely used in various industrial environments, especially where precise control of the pressure of liquid or gaseous media is required.

The global Diaphragm Pressure Switch market size was estimated at USD 781.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
