Abstracts

Diastatic malt extract is a concentrated syrup derived from malted grains, primarily barley, which undergoes a controlled malting process to preserve natural enzymes?specifically alpha-amylase and beta-amylase?that break down starches into fermentable sugars during baking or brewing; it is characterized by its enzymatic activity, measured in diastatic power (DP), and is distinct from non-diastatic malt extracts, which are heat-treated to deactivate enzymes and serve primarily as sweeteners or flavor enhancers. This product is widely used in artisanal baking to improve dough fermentation, crust browning, and flavor development, as well as in craft brewing to boost fermentable sugar content and enhance mouthfeel, with key quality indicators including enzyme potency, consistency, color, and solubility.

The global Diastatic Malt Extracts market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
