## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Diblock Copolymers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Diblock copolymers are a type of block copolymer composed of two distinct polymer chains (blocks) covalently bonded together end-to-end. Each block is made from a different monomer, resulting in a material that combines the physical and chemical properties of both constituent polymers. The general structure can be denoted as A<sub>n</sub>B<sub>m</sub>, where "A" and "B" represent polymer segments with different chemical compositions. Due to their dual nature, diblock copolymers can self-assemble into various nanoscale morphologies (such as spheres, cylinders, or lamellae) in selective solvents or solid-state, making them useful in applications like nanolithography, drug delivery, and thermoplastic elastomers. The key market driver for diblock copolymers lies in their unique ability to self-assemble into well-defined nanostructures, enabling advanced applications across nanotechnology, electronics, and biomedical fields. In the electronics sector, diblock copolymers are increasingly used in nanolithography and next-generation semiconductor patterning due to their tunable domain sizes and phase separation properties. In the biomedical field, their amphiphilic nature makes them ideal for drug delivery systems, tissue engineering scaffolds, and diagnostic tools. Additionally, the growing demand for high-performance materials in adhesives, coatings, and thermoplastic elastomers in automotive and consumer goods industries further accelerates market growth. Rising investments in nanomaterials research and customization potential across various end-use sectors continue to fuel the adoption of diblock copolymers globally.

The global Diblock Copolymers market size was estimated at USD 6483.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
