Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dichlorodifluoromethane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global Dichlorodifluoromethane production reached approximately 55 kilotons, with an average global market price of around US$ 5,800 per ton. Dichlorodifluoromethane is a colorless, nonflammable halocarbon with the chemical formula CCl?F?, commonly known as Freon-12 or R-12. It is a chlorofluorocarbon (CFC) that was widely used as a refrigerant, aerosol propellant, and foam-blowing agent due to its stability, low toxicity, and excellent thermodynamic properties.The key market drivers for Dichlorodifluoromethane (also known as Freon-12 or R-12) historically stemmed from its extensive use as a refrigerant in air conditioning, refrigeration, and automotive cooling systems due to its high cooling efficiency, chemical stability, and non-flammability. It was also widely used as a propellant in aerosol products and a blowing agent in foam production. However, the phase-out under the Montreal Protocol has shifted market dynamics: current demand is primarily driven by the servicing and maintenance of legacy refrigeration systems that still operate on R-12, especially in developing regions and niche sectors like vintage automotive restoration. Additionally, regulated recycling and reclamation markets support limited supply, with strict environmental compliance and reclamation infrastructure fueling residual demand.

The global Dichlorodifluoromethane market size was estimated at USD 318.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global
