## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Didodecyl 3,3'-Thiodipropionate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Didodecyl 3,3'-Thiodipropionate is a typical thioester secondary antioxidant, produced by the esterification reaction of lauric acid and thiodipropionate. It appears as a white to light yellow crystalline powder or granules and exhibits excellent heat resistance, low volatility, and good compatibility. Global production in 2024 was estimated to be 23,000 tons, with an average selling price of US\$8,000 per ton. The upstream production of dilauryl thiodipropionate primarily relies on basic chemical raw materials, such as thiodipropionic acid and lauryl alcohol. Manufacturers produce dilauryl thiodipropionate through esterification and purification processes, which require high control over reaction conditions and color stability. Downstream applications are concentrated in the plastics industry, where it serves as a secondary antioxidant in polyethylene and polypropylene. It can also be used as an antioxidant in edible oils and fat-rich foods.

The global Didodecyl 3,3'-Thiodipropionate market size was estimated at USD 184.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
