Abstracts

Diesel engine glow plugs are essential electrical heating devices used to preheat the combustion chambers of diesel engines, particularly during cold starts, by raising the air temperature to a point where the injected fuel can ignite spontaneously without the need for a traditional spark ignition system; they consist of a heating coil encased in a metal shell, typically made from materials like ceramic or metal alloys, and function by rapidly reaching high temperatures when an electrical current is applied, ensuring reliable engine ignition, reducing startup emissions, and improving overall combustion efficiency in compression-ignition engines.

The global Diesel Engine Glow Plug market size was estimated at USD 1210.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.75% during the forecast period.
