### Report Overview

The ignition quality of diesel fuel is linked to the ignition delay time, the time between the start of injection and the start of combustion. Fuels of high ignition quality are characterized by short ignition delay and vice versa, fuels of poor ignition quality produce long ignition delay. The process for determining true cetane rating requires the use of precisely controlled test engines and procedures or fuel analysis with exacting instruments and conditions. Accurate analysis of Derived Cetane Number (DCN) is an important tool for refineries to maintain fuel consistency and quality.
