Abstracts

Dietary fibers are long thread-like structures that are widely present in fruits, vegetables, and grains. They are also known as roughage or bulk and include all parts of plant foods that are not digested or absorbed by the body. Though indigestible, they prove to be extremely useful in maintaining bowel regularity and preventing constipation and other bowel abnormalities. Recent studies have shown that people with high intake of fibers are less prone to diseases such as obesity, stroke, and hypertension.

Consequently, people across the globe have become more concerned and cautious about their health and fitness and are paying more attention to the nutritional content of the food they consume. This change in the populace's preferences will result in the augmented demand for fiber-based food products, which in turn will result in the growth of the dietary fiber market during the forecast period.

The global Dietary Fiber market size was estimated at USD 8128.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
