Report Overview

Diethylhexyl Sebacate, also known as DEHS, is a synthetic organic compound commonly used as a plasticizer in various industrial applications. It is an ester derived from sebacic acid and a mixture of diethylhexanol isomers. DEHS is characterized by its clear, colorless, and odorless liquid form, which makes it suitable for use in the production of flexible PVC, adhesives, sealants, and other polymer-based materials. As a plasticizer, it enhances the flexibility, workability, and durability of these materials by reducing their brittleness and increasing their resistance to environmental factors such as heat and UV radiation. DEHS is also valued for its low volatility, which helps maintain the stability and longevity of the products in which it is used.
