Abstracts

Diethyltoluamide repellent, commonly known as DEET repellent, is an insect repellent product containing the active ingredient N,N-Diethyl-meta-toluamide, which functions by interfering with insect olfactory receptors to effectively deter biting insects such as mosquitoes, ticks, and flies. Available in various formulations including sprays, lotions, wipes, and creams, DEET repellents are widely recognized for their efficacy and durability, with concentration levels typically ranging from 5% to 100% to cater to different user needs and exposure durations. The product is extensively used in both consumer and professional contexts, including outdoor recreational activities, travel in tropical regions, military operations, and public health initiatives aimed at preventing insect-borne diseases such as malaria, dengue, and Zika virus. Regulatory oversight, particularly by agencies like the EPA in the United States and the ECHA in Europe, ensures that DEET repellents meet safety and efficacy standards, while ongoing research and development focus on improving user experience through enhanced formulations that reduce skin irritation and environmental impact.

The global Diethyltoluamide Repellent market size was estimated at USD 410.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
