## Abstracts

Differential Leak Tester is a precision instrument used to detect leaks in closed containers or systems. Its working principle is to inflate the object to be tested and the reference object to the same pressure under the same conditions, and then monitor the pressure difference between the two through a high-precision differential pressure sensor to determine whether the object to be tested has a leak. This method has high sensitivity and accuracy and is suitable for detecting tiny leaks.

The global Differential Leak Tester market size was estimated at USD 611.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
