Abstracts

Digital ad intelligence software monitors competitors' advertising campaigns as well as optimizes ad spend by providing ad revenue data. Companies use digital ad intelligence software to evaluate where competitors are advertising, the ad creatives their competitors are running, and how much their competitors are spending on their ads. Competitive intelligence is a main component of this type of software, as it can help businesses identify which ad creatives are performing best for their competitors (i.e., types of messaging, CTAs, ad sizes and images, etc.). Digital ad intelligence software can also track competitors' key performance indicators, like cost per impression (CPI) and click-through rate (CTR). The future market trends of Digital Ad Intelligence Software are driven by the increasing demand for data-driven and personalized advertising, the proliferation of digital channels and devices, the growth of programmatic and video advertising, and the emergence of new technologies such as artificial intelligence and big data analytics. Some of the key trends that are expected to shape the market are: The rise of ad-supported video services, such as YouTube, Hulu, and Peacock, which offer a large and engaged audience for advertisers, as well as rich data and analytics capabilities. According to Insider Intelligence, the US ad-supported video-on-demand (AVOD) market will grow from \$27.1 billion in 2020 to \$59.5 billion in 2025, at a CAGR of 17%. The shift to upper-funnel ads, such as video, display, and social media, which aim to raise brand awareness and generate interest among potential customers, rather than lower-funnel ads, such as search, which focus on driving conversions and sales. According to Insider Intelligence, video ads will account for 40.9% of US digital ad spending in 2025, up from 33.8% in 2020, while search ads will decline from 41.5% to 34.8% in the same period. The adoption of artificial intelligence and big data analytics, which enable advertisers to leverage large and complex data sets to optimize their ad campaigns, improve their targeting and segmentation, enhance their creatives and messaging, and measure their impact and attribution. According to

Mordor Intelligence, the global market for artificial intelligence in digital marketing is expected to grow at a CAGR of 30.5% from 2020 to 2025.

The global Digital Ad Intelligence Software market size was estimated at USD 1131.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
