Report Overview

Cable converter: Cable television represented a possible alternative to deployment of UHF converters as broadcasts could be frequency-shifted to VHF channels at the cable head-end instead of the final viewing location. However, most cable systems could not accommodate the full 54-890 MHz VHF/UHF frequency range and the twelve channels of VHF space were quickly exhausted on most systems. Adding any additional channels therefore needed to be done by inserting the extra signals into cable systems on nonstandard frequencies, typically either below VHF channel 7 (mid-band) or directly above VHF channel 13 (super-band).

The global Digital Cable Set-Top Box market size was estimated at USD 5044 million in 2023 and is projected to reach USD 7241.55 million by 2032, exhibiting a CAGR of 4.10% during the forecast period.
