### Report Overview:

A Digital Capacitive Coupling Isolators is used to get a digital signal across a galvanic isolation boundary. They serve a similar purpose to optocouplers, except optocouplers are far too slow and error prone for high speed (1MHz+) digital signals. They also use a different coupling technology, usually transformer or RF link as opposed to an optical link.

Capacitive coupling is the transfer of energy within an electrical network or between distant networks by means of displacement current between circuit(s) nodes, induced by the electric field. This coupling can have an intentional or accidental effect.

The Global Digital Capacitive Coupling Isolators Market Size was estimated at USD 189.02 million in 2023 and is projected to reach USD 216.65 million by 2029, exhibiting a CAGR of 2.30% during the forecast period.
