Abstracts

The Digital CCUS Solution is a new technology system that intelligently empowers the entire traditional CCUS chain by deeply integrating cutting-edge information technologies such as digital twins, artificial intelligence, the Internet of Things, and big data analytics. Its core lies in constructing a virtual dynamic model covering all stages of carbon capture, transportation, utilization, and storage. This model uses IoT sensors to collect real-time data on equipment operation status, process flow, and geological storage, and leverages artificial intelligence algorithms for intelligent analysis, predictive optimization, and autonomous decision-making on massive amounts of data. Specifically, it utilizes machine learning to dynamically optimize solvent and energy consumption in the carbon capture stage; digital twins enable leak risk warnings and intelligent scheduling in pipeline transportation; big data analysis assesses the stability and long-term safety of the stored material in the geological storage stage; and artificial intelligence accelerates the development of new catalysts and conversion pathways in the carbon utilization stage. Through end-to-end digital integration, this solution significantly improves the operational efficiency, economy, and safety of the CCUS system, reduces project investment and operational risks, and provides reliable data support for the accurate verification of carbon credit assets. Ultimately, it drives the evolution of CCUS from an isolated project to a networked, platform-based, and intelligent new industrial ecosystem. The global development of Digital CCUS Solution exhibits a "three-pronged leadership" pattern. North America, leveraging cross-industry collaborations between Silicon Valley tech giants and energy companies, leads in AI optimization and digital twins. Europe, building on Industry 4.0, focuses on standardized platform construction and blockchain-based carbon credit traceability. The Asia-Pacific region, represented by China, is rapidly implementing smart pipeline monitoring and large-scale application scenarios. Currently, technological maturity is uneven; basic digital monitoring is widespread, but AI decision-making and full-chain digital twins are

still in the demonstration stage. Future development will depend on improving the accuracy of industrial algorithms, establishing cross-system data interoperability standards, and lowering the digitalization threshold for small and medium-sized projects through cloud computing.

The global Digital CCUS Solution market size was estimated at USD 241.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
