Abstracts

Digital clone live streaming service is a commercial application based on artificial intelligence, multimodal interaction, and real-time rendering technologies. It collects biometric data such as a person's appearance, voice, facial expressions, and language style to train and generate highly realistic virtual digital avatars. These avatars can then replace or assist real people in conducting 24/7 live streaming sales, product explanations, and user interaction on e-commerce platforms. This service relies on large-scale models to achieve intelligent script generation, real-time Q&A, and emotional expression. It can even dynamically optimize operational strategies based on live streaming data. Its core value lies in overcoming the physical and time limitations of real live streamers, significantly reducing labor and operational costs, and covering all-day traffic through a "human-machine collaboration" model. Currently, it is widely used in fields such as apparel, beauty, local services, and cross-border e-commerce, becoming a digital tool for enterprises to reduce costs and increase efficiency. Digital clone live streaming has broad prospects and will accelerate its evolution towards intelligence, compliance, and ecosystem development in the future. On the one hand, continuous breakthroughs in generative AI and multimodal technologies will drive digital avatars from L3 to L4-L5 levels, enabling scriptless real-time interaction and personalized marketing, significantly improving live streaming conversion rates and user experience. On the other hand, with the implementation of relevant policies and regulations, the industry will develop healthily within the framework of data security, copyright confirmation, and platform rules. Simultaneously, intensified market competition and the democratization of technology will drive service prices down, propelling the era of "digital avatars for everyone." In the future, digital avatars will not be limited to e-commerce live streaming but will be deeply integrated into cross-border multilingual sales, metaverse scene interaction, and the entire marketing loop.

The global Digital Clone Live Stream market size was estimated at USD 3564.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 35.00% during the forecast period.
