Abstracts

Digital clones refer to the creation of a highly similar digital replica of a real person using advanced technologies such as artificial intelligence (AI), machine learning, and computer graphics. This process requires collecting multi-dimensional data on the target person's appearance, voice, movements, personality, and even thought patterns using specialized equipment. This data is then trained using a large model to ultimately generate a virtual entity capable of simulating human behavior and engaging in intelligent interactions in the digital world. It can not only replicate an individual's physical appearance and language style but also mimic their knowledge system and decision-making tendencies, achieving a leap from mere "skin-copying" to "core identity." Currently, digital clones are widely used in virtual representation, intelligent customer service, and emotional companionship, but their development also faces serious challenges related to data security, privacy protection, and ethical considerations. Digital cloning has a promising future and will accelerate its evolution towards anthropomorphism, democratization, and professionalization. On the one hand, continuous breakthroughs in technologies such as large-scale models and multimodal interaction will constantly improve the emotional perception, autonomous decision-making, and real-time rendering capabilities of digital clones, making their interactive experience infinitely closer to that of real people. On the other hand, technological iteration and intensified competition are driving production costs down rapidly from millions of yuan to thousands or even hundreds of yuan, greatly reducing the barriers to use for individuals and SMEs, and promoting their widespread adoption from corporate "digital employees" to personal "digital avatars." In the future, with the improvement of relevant compliance systems, digital clones will show greater potential in scenarios such as e-commerce live streaming, smart offices, emotional companionship, precision medicine, and digital immortality. However, it is also urgent to establish a robust governance framework in areas such as data privacy, definition of subject rights, and

technological ethics to ensure that their development is always benevolent and that they become an intelligent hub connecting the physical and digital worlds.

The global Digital Clones market size was estimated at USD 3051.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 34.00% during the forecast period.
