Abstracts

The digital collectibles auction platform is an online trading system based on blockchain technology that generates unique digital certificates for digital artworks and collectibles. It uses smart contracts to facilitate the issuance, purchase, collection, and transfer of digital assets, while ensuring copyright protection, transaction transparency, and scarcity. The industry's gross profit margin can reach 50-70%. The upstream sector is primarily comprised of blockchain technology providers, including consortium chains like Ant Chain and Tencent Zhixin Chain, as well as public chains like HuoChain and Solana, providing underlying technical support for collectibles. The midstream is the project platform layer, responsible for the creation, distribution, and trading of collectibles, encompassing comprehensive platforms, digital content platforms, and gaming/metaverse platforms. The downstream sector encompasses trading and derivative applications, including primary market transactions, secondary market transfers (some platforms have limited holding periods), and digital collectibles derivative services in news media, sports, tourism, and other fields. The efficiency of industry chain collaboration depends on the degree of technical standardization and data flow capabilities.
