Abstracts

The digital collection service platform is a digital asset trading and management platform based on blockchain technology, which provides users with services to create, display, trade and collect digital collections. This type of platform stores and verifies digital content such as artworks, music, videos, game props, etc. in the form of NFT (non-fungible tokens) to ensure the uniqueness and transparent ownership of each collection. Through the digital collection service platform, users can safely purchase, trade and display digital assets, establish a digital collection system, and support creators to obtain income through digital copyrights. Digital collection service platforms are driving changes in the ownership of artworks and digital content, breaking the regional and physical limitations of the traditional art market and providing a new way for creators and collectors to interact. Through blockchain technology, these platforms ensure the uniqueness and immutability of digital collections, making each work uniquely owned and traceable, which not only gives digital assets real collection value, but also provides creators with a channel for direct income. At the same time, the rise of digital collection service platforms has promoted the prosperity of digital art, music, virtual items and other fields, bringing new business models and market opportunities, and meeting the growing demand for digital assets.

The global Digital Collection Service Platform market size was estimated at USD 334.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.20% during the forecast period.
