## Abstracts

Digital collectibles trading platforms are blockchain-based online marketplaces that allow users to create, buy, sell, collect, and manage digital assets, typically in the form of non-fungible tokens (NFTs). These platforms support the trading of a diverse range of digital collectibles, including digital artwork, virtual real estate, game props, music, and sports highlights. Through decentralized smart contract technology or centralized management, these platforms provide creators and collectors with a secure and transparent trading environment, verifying and safeguarding the uniqueness, scarcity, and ownership of digital assets. The downstream customers of digital collectibles trading platforms primarily include cultural and tourism institutions, artists and creators, brands, sports event organizers, entertainment companies, and a large number of digital collectors. These clients use the platforms to distribute, display, trade, and socially promote digital collectibles. The downstream industry chain extends to multiple areas, including IP content development, blockchain evidence storage, virtual exhibitions, brand marketing, and the fan economy. Cultural and tourism institutions and museums use these platforms to digitize and disseminate cultural assets. Artists and brands monetize and engage with users through limited-edition NFTs or digital collectibles. Consumers primarily participate in transactions for the purpose of collecting, investment, or as a symbol of status. Overall, the downstream digital collectibles trading platform focuses on "content assets + user ecology," promoting the integrated development of digital cultural creativity, brand marketing, and the virtual economy. The gross profit margin of the digital collectibles trading platform is 69%. The rise of digital collection trading platforms marks a new era for the digital economy, which has not only changed the way people collect and invest, but also promoted innovation in multiple industries such as art, entertainment, and sports. By giving digital collections uniqueness and scarcity through blockchain technology, these platforms provide creators with unprecedented profit opportunities while enhancing users' sense of

participation and belonging. However, with the rapid development of the market, digital collection platforms are also facing challenges such as supervision, copyright, and environmental impact. In the future, how to balance innovation and compliance, as well as exploring greener and more sustainable operating models, will become the key to the development of digital collection platforms.
