Abstracts

Digital Communication Equivalent-Time Sampling (ETS) Oscilloscopes are specialized oscilloscopes used to analyze high-frequency digital signals, particularly in communication systems where the signals are too fast to be directly sampled with conventional real-time sampling techniques. ETS oscilloscopes provide a way to analyze very high-speed digital signals by capturing and reconstructing repetitive signals over multiple cycles to achieve high temporal resolution, even when the oscilloscope's sampling rate is lower than the signal's frequency.

The global Digital Communication Equivalent-time Sampling (ETS) Oscilloscopes market size was estimated at USD 316.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
