### Report Overview

A digital compass is like its analog counterpart. Both compasses use the Earth's magnetic field to determine which way is North, and both help bikers, hikers, mapmakers and trail makers know which direction they are heading. The difference is that an analog compass can wobble because of movement and may encounter interference from strong magnetic sources, so inaccuracy is a problem. A digital compass is much more accurate and sturdy, because it will only use the North Pole as a guiding mechanism. Aside from serious hikers and trail makers, the military also uses these compasses for the best accuracy.

Asia Pacific is expected to emerge as a high growth market over the forecast period owing to increasing demand for smartphones. China and India are perceived to behold placid growth in future. Huge demand potential and low labor costs are expected to help China and India emerge as a worldwide hub for digital compass manufacturing industries.
