Abstracts

A digital concierge system is a type of customer experience (CX) technology that can provide guests with conversational and contextual assistance. Some digital concierge systems are also used in conjunction with mobile devices, so the experience can continue from a digital signage screen to a device in a guest's hand. Additionally, a virtual concierge will provide content at just the right time; with access to data, a traditional concierge might not have, like the wait time in the parking lot, the temperature outside, or the status of particular flights. Guests and customers can also engage through touchscreen signage technologies, access additional info via QR Codes, and more.
